

MEMBER SUPPORT MESSAGE

Winter weather energy use.

Recent winter storms made homes work harder to keep you warm.

Two severe winter storms sent thermometers plummeting to record lows in mid-February – increased energy use is unavoidable, especially as your HVAC fights to cover a Temperature Gap worse than the hottest summer day. Individuals forced to stay home due to ice and snow will already use more energy, as much as a 30% increase, while their heating system fights to cover the difference between the temperature inside and the freezing weather outside. Use these helpful tips to help manage your usage during severe cold weather events.

Monitor Energy Usage.

More than just a payment portal, SmartHub can help you monitor and manage your home's increased daily energy usage.

MONITOR TRENDS

Monthly averages can be monitored while viewing daily usage patterns along with the days of the billing period.

ANALYZE

Review two bill histories side-by-side to monitor differences between the same month from the previous year.

TRACK

Get a detailed look at past and current usage. This data can also be viewed with weather trends by month or day.
