Extreme weather energy use

Whether cooling or heating, extreme weather makes you home work harder.

When extreme weather hits, increased energy use is unavoidable. In an effort to stay comfortable, we make our HVAC systems work harder to cover the increasing temperature gap between the outside temperature and our desired temperature inside. We also tend to stay indoors more during extreme temperatures causing more energy use. This increase energy use can be as much as a 30% more than normal periods. Use these helpful tools to manage your energy usage save money during extreme weather events.

Monitor energy usage.

More than just a payment portal, SmartHub can help you monitor and manage your home's increased daily energy usage.

Monitor trends

Monthly averages can be monitored while viewing daily usage patterns along with the days of the billing period.

Track

Get a detailed look at past and current usage. This data can also be viewed with weather trends by month or day.

Analyze

Review two bill histories side-by-side to monitor differences between the same month from the previous year.
